MPB power base™

Distribution Made Easy

MPB is built for Customer Service, and good Customer Service means providing instant access to the information that the customer needs .

MPB software has been developed for small to mid-size sales and distribution companies who need to manage business growth without the cost of a large IT department.

MPB has a proven track record of successfully increasing order processing capability, and managing **tens of thousands of sales transactions per month**.

MPB provides a transaction framework that allows **real-time order entry** and customer service solutions – real-time, as in **"on the phone with the customer right now"** -- without separate data entry and time-consuming callbacks.

MPB enhances warehouse operations by providing faster, error-free pick/pack, improved inventory accuracy, and seamless drop shipment capability to your customer.

MPB includes full data interface with third-party shipping software (including Pitney Bowes, UPS, DHL, and other major carriers) and major credit card processors – saving time, eliminating errors and providing instant information for customer service.

MPB presents all your critical transaction data on customizable, easy-to-read screens, with natural links to additional information -- users do not have to copy data and move to new screens to find the information that they need, nor do they encounter the long lag of some "drill down" processes.

MPB offers **a complete 24/7 internet solution** that allows customers to help themselves with inventory availability, placing orders, changing orders, tracking order progress/backorders, tracking shipments with the carrier, and even managing their accounts, including setting up additional users and reviewing their account detail.

MPB allows managers instant access to operational status with real time tracking of orders through the warehouse, as well as daily accounting summaries and a host of customizable reports.

MPB offers complete operational security with multi-level access control at the menu level, program level, and function level, with an additional level of transaction security for complete audit control.

MPB's high-speed processing provides powerful, extensive and rapid search capabilities, and can easily accommodate remote users with internet access.

MPB can easily provide data outflow to legacy systems and third-party accounting packages for enhanced operations on a monthly, weekly, daily, or even real-time basis.

MPB is a product of **JGA, Inc.**, which has provided software products and services to Commercial and Government clients for over 20 years. With its consistent history of 90%+ ratings in Customer Satisfaction from Dunn and Bradstreet, JGA has a proven track record of successful performance. MPB is a powerful example of JGA's commitment to exceeding its customers' expectations
